

2002 - 2010 Inspection-Based, Facility Compliance Rates

Compliance rates are based the number of discrete facilities or entities inspected by the programs and reflects the percentage found in compliance. Entities are only counted once even if inspected multiple times within a given period. One or more violations at any inspection in the period counts as non-compliance. The entities counted here are only where routine or pre-planned inspections occurred and are primarily where permits, licenses, or other Departmental approvals exist. These figures exclude observations based solely on submittals of self-reported information, monitoring and investigations (such as those stemming from hot-line calls or complaints). This report was run on July 18, 2011.
